SKELETON DIAL

GT TOUR SKELETON

With its GT Tour Skeleton, Reservoir once again exceeds appearances. The essence of one of its flagship models, influenced by sports car, is revealed. As for a competition car, any unnecessary ornaments are removed to reveal the fundamental elements, to reach the quintessence. Transparent, the open dial disappears. Even more spectacular, the retrograde minute hand, colored in an orange hue evocative of competition dashboards. The bridges of this apparent skeleton watch, treated in a deep blue, contrast with the brushed steel of the circular part and the complications. Subtle details, if the perfectly blued screws are forgotten, the interior carved pattern of the differential wheels, similar to the butterflies of wheel fixing, does not escape the enthusiasts of racing cars. The innovative hour cartridge is treated for the first time in white SuperLuminova, ensuring night-time reading, while the hour indication disc is made of transparent Plexiglas. A complementary device to the indexes and logos printed under the sapphire crystal. Delivered in a prestigious wooden box with an additional NATO strap.
