AIRFIGHT JET MARK II

Some watches stand out for their dial. Others for their movement. The most distinctive ones, however, are instantly recognizable by their silhouette. With Mark II, RESERVOIR takes a new step in asserting its identity. For the first time, we are extending our design standards, historically focused on complications, to the watch as a whole, from the case to the integrated bracelet. With Mark II, we set out to create a watch architecture capable of existing in its own right. A design recognizable at first glance. A silhouette that no longer simply complements the dial, but fully contributes to the identity of the piece. Powered by the RSV-240 caliber: patented in-house proprietary 113-part complication module, coupled with a modified LJP G100 self-winding mechanical movement. Brushed stainless steel finish. Shipments start from November 9th.
